Its not always that your kid visit a dr and specially a dentist and leaves with a smile. Thats what has happened with Dr Abhishek Soni and crew. He has been amazing, always engaging with the kid and most importantly friendly. As a parent you always want the best care for your child and a dr who listens to you and explains

Smile an everlasting smile is what you have given to our son Farhan.

We were highly recommended by one of our common acquaintance to Dr. Abhishek Soni for treating our son's dental issues.

With a leap of faith we flew all the way from Dubai to Pune to get the treatment done and it was worth.

Knowing that we are only arriving for this treatment Dr. Abhishek Soni gave his full support and attention and ensured the whole treatment gets done in the scheduled time.

With regards to his expertise, I believe he is one of the best paediatric dentist in India and it reflected very well from his approach and guidance.

It was well established when we reached his clinic and see numerous awards and accolades about his work.

We knew Farhan had some serious dental issues but only came to know the criticality when we saw the pictures on the amount of treatment done.

Excellence in Dentistry Awards 3 years Consecutively

19. Super Star Award

Famdent initiated the Superstar Awards in 2016. This was in recognition of Dentistry stalwarts who have applied, being nominated and won consistently over the past few years. These are high achievers who have demonstrated continued excellence year after year. They are recognised as "Above & Beyond" irrespective of their individual category and are selected at the discretion of the judges. We are honoured to bestow them with "Above & Beyond" Superstar award. Looking forward to your continued applications in future to be role models and inspire the next generation to excel in Dentistry.

Hearty Congratulations to all Superstar Award Winners! We will surely see many more Superstar Award winners elevating Indian Dentistry to newer heights.

Committed to Dental Excellence

18 February, 2021

Dr. Abhishek Soni
Pune, Maharashtra

Dear Dr. Abhishek

Sub: Nomination as SECTION EDITOR for CLINICAL DENTISTRY PUBLICATION

The Indian Dental Association (IDA) is an Authoritative and a recognized voice of dental professionals in India. IDA is committed to improving public oral health by promoting advanced, science-based dentistry that puts the patient at the centre through our initiatives in education, research and development of high standards for dental care in India.

IDA represents more than 75,000 dental professionals and has 29 State branches and 450 local branches. Through its initiatives and campaigns, IDA reaches out to, dental professionals, dental students, educators and the public to safeguard and promote optimal oral healthcare in the country. Among its several activities IDA also brings out 7 publications on a monthly basis. One of them is CLINICAL DENTISTRY, a scientific publication that emphasises on clinical articles and case reports.

Vision The association's vision is to improve oral health and quality of life and achieving 'Optimal n Oral health for all.

Mission IDA is dedicated to supporting dental professionals in their practice by enhancing and updating their skills and knowledge. The association is the nation's most respected leader in promoting oral health, tobacco cessation and early Oral cancer detection to improve quality of life and eliminate oral health disparities.

Clinical Dentistry
This is a complete clinical journal for dental practitioners. It is an independent, scientific, peer reviewed publication aimed at dissemination of significant clinical and laboratory information and reviews of significant importance to the dental profession.

Clinical Dentistry provides a platform to the dental professionals to publish case reports, clinical reviews, share their experience and skills on technological developments of practical relevance. It helps enhance knowledge and attempts to keep abreast of the current advancements in dental science in the pursuit of professional excellence in clinical practice.

Practice penned on Paper Recent Publications

Contemporary Pediatric Dentistry - Novel Materials And Techniques!

Dr. Abhishek Soni
 Dr. Abhishek Soni, M.D., is a Pediatric Dentist at the Department of Pediatric Dentistry, Government College Hospital, Pune, Maharashtra. He has been practicing since 2010 and is also a member of the Indian Association of Pediatric Dentists (IAPD). He has been awarded the Gold Medal for Best Paper at the 10th International Conference on Pediatric Dentistry, Pune, Maharashtra, India, in 2017.

Abstract
 The materials like MFA and Bioactive in our disposal has helped us achieve promising results with indirect pulp therapy procedures and has made direct pulp capping a reality in the primary teeth. The vaccine sensitive cycle that the child need to bear the brunt of, has seen a complete circle with the advent of Silver Diamine Fluoride (SDF) - a caries abatement halogen. SMART (Self-Modified Anticaries Restorative Treatment) and the Hall's technique which aim at controlling the disease in cariated caries lesions by halting removal or control.

Lastly parents have been so enthused with the appearance of teeth that Zirconia crowns have opened up the conventional metal crowns. The response of the soft tissue around these crowns gives a life like feel to the extraoral restoration as well as boosts the child's morale at the psychological level. Managing white spot lesions was never so easy in children but with the advent of ZSDS (zinc silico phosphate), we no more have to rely on the kids and the parents compliance with regards to daily topical application of the remineralizing paste available in the market.

We have also learnt to harness the regenerative potential of the dental pulp. The new vitalization or regenerative treatment approaches to teeth with necrotic root formation and pulp necrosis have become a part of the therapeutic endodontic spectrum. We shall look into available options using novel techniques and materials like the operator and oil dam technique while doing simple procedures like Preventive Resin Restorations and Sealants in Pediatric and Preventive dentistry.

Highlights of Novel Zirconia crown and Pediatric Endodontics Case Report
 Four year old girl presented with pain and swelling in lower left back tooth region. A thorough medical history revealed the child to be asthmatic, and no frequent liquid intake for the same and absent congestion since 2 years. She also had a history of trauma with 61 one year ago, from the time of clinical presentation. On clinical and radiographic examination the tooth had an unresorbed sealant with labial inclination of the enamel crown with external root resorption. We attempted the first sitting of the tooth 70 to control the extra-radicular abscess. Since the child did not have a pleasant past dental experience, we managed to anesthetize the tooth with a Triple Antibiotic Paste (TAP) and planned for full mouth rehabilitation under General Anesthesia.

Sealants And Rationale For Treatment
 51, 52: 45 Polycarbonate followed by Fluorination with Vapores (New Dental) followed by Zirconia Crown.
 55, 64, 65: Composite restoration (Bulk fill BM ESPE) using the stamp technique.

Introduction
 It has been rightly said that most of us are of an apprehension in children and you have witnessed Pediatric Dentistry. Pediatric Dentistry has come a long way in terms of behavior modification and management as well as the advancement available. The advent of dental materials available at our disposal now has made managing and treating the child a fun filled experience. Pediatric Dentistry not only focuses on the lesion but in managing the carious lesion with minimotomic interventions. Our understanding of the pulp dentin complex with the assistance of the

Abstract
 This study reports usage of SDF as extensive case series in various form of SMART, in proximal deep caries as indirect pulp therapy medicament, sealants and in MIH in various clinical situations in pediatric dentistry.

Abstract
 With correct diagnosis and appropriate treatment planning, SDF can be an indispensable tool for both minimally invasive pediatric dentistry (MIPD) and aerosol free dentistry (AFD) especially in pandemic times.

Abstract
 SDF parental handout form, clinical protocol along with decision making tree and usage of teflon tape could be immensely helpful for practitioners for administering SDF in both primary and permanent dentition routinely.

Keywords: Case Reports; COVID-19; Dental Caries; Dental Enamel

Silver diamine fluoride as a minimally invasive and aerosol free approach in pediatric dentistry: An extensive case series

Abhishek Soni¹, Sanchit Paul², Priyanka Sachdeva³

Highlights

This study reports usage of SDF as extensive case series in various form of SMART, in proximal deep caries as indirect pulp therapy medicament, sealants and in MIH in various clinical situations in pediatric dentistry.

With correct diagnosis and appropriate treatment planning, SDF can be an indispensable tool for both minimally invasive pediatric dentistry (MIPD) and aerosol free dentistry (AFD) especially in pandemic times.

SDF parental handout form, clinical protocol along with decision making tree and usage of teflon tape could be immensely helpful for practitioners for administering SDF in both primary and permanent dentition routinely.

Abstract
 The current pandemic of COVID-19 warrants a repeal from conventional dentistry to an aerosol free, minimally invasive yet maximally effective clinical approach. Silver diamine fluoride (SDF) is an established modality for caries arrest in children fulfilling all the above. This extensive 25 case series highlights various clinical situations in which SDF was successfully used in children between 1-12 years of age with asymptomatic carious lesions of ICDAS score 2 or more in primary and permanent teeth. Primary outcome measure was caries arrest in the form of the hard and shiny lesion with no/minimal sensitivity. The secondary outcome measure was the zombie effect which was the residual staining on other tooth surfaces and indications of substantivity. SDF can be effectively and efficaciously used across different behaviour patterns and age groups of children in a various clinical scenario for both primary and permanent teeth routinely experienced in a paediatric dental office especially during these pandemic times with minimal aerosol generation.

About the workshop

It is always a challenge, when it comes to providing quality dental care and pleasant experience to children with innate/traitfear and anxiety; or in those with an unpleasant/negative past dental experience irrespective of the age group. We all are aware about the psychosomatic stress that a dental procedure may cause if not done rightly especially for the younger ones. It's 2021 and most of us, the pediatric dental community, are well aware about laughing gas/nitrous oxide oxygen sedation phenomenon happening in India. But do we really think that only one tool can provide all the possible solutions which we face in our day-to-day practice?

Through this continuum, we wish to highlight how besides the basic behavior management techniques which we have been well taught and trained, various other routes of mild to moderate sedation can best be used in our regular pediatric practice. A stepwise approach to the choice of inhalation; oral or intravenous sedative and pediatric dental GA shall be highlighted in this 120 mins session curated with myriad of live recorded clinical videos in various situations. The young pediatric dentists can immensely benefit from this session which goes beyond the conventional didactic way.

“Let us best harness the true potential of not just of the drug, but also the child and be known a salubrious place for the little ones. It's not just about treating teeth; it is about the experience that we can contribute to creating a child who does not fear dentistry and become intrepid adults”

Dear Dr. Sanchit Paul and Dr. Abishek Soni,

We take immense pleasure in informing you that the Department of Pediatric and Preventive Dentistry at Sri Ramachandra Dental College and Hospital is now equipped with the CONSED sedation unit. With the installation of the NOIS unit, the quality of dental care being provided to the children will improve and so will the postgraduate training program.

At this juncture, we would like to take a moment and thank the fore runners of sedation training that happened in this department. We express our heartfelt gratitude and sincere thanks to you for making us take the leap into the world of oral sedation for providing quality dental care for children.

Oral sedation would not have been possible without the training and support provided by you. Seeking your guidance and continued support as we move ahead into the realm of Conscious sedation

1months old baby

upper lip tie

tongue tie

←  Ashwini Chillal
1 review

★★★★★ 9 minutes ago

I gave birth to a baby boy through C-section. My baby was given to me after two days for breastfeeding. I used to feel pain while breastfeeding. When I observed him, I thought he was having a tongue tie. Surprisingly his tongue tie was unnoticed by the pediatrician at birth.

We went to Dr. Preeti Deshmukh, a Lactation Consultant. She confirmed my thought regarding my baby's tongue tie. She referred us to Dr. Abhishek Soni. We called him for an appointment. We had a warm welcome at his clinic. The doctor examined and told us that the baby is having a tongue tie and a lip tie as well. He also explained us in detail about the same.

also explained us in detail about the same. He told us why we should go for the surgery and how it will help us in the future. He asked us to do few intra and extra oral exercises before the surgery. As our baby was 2 months old we took our time and proceeded with the surgery on 16th March, 23. The surgery was done in an hour. After the surgery there were regular follow-ups and support from the doctor and his team. Post surgery our baby went into nipple confusion, as I used to give him my expressed breast milk through bottle. After regular trying for 3-4 days our baby is now latching properly. I am now able to exclusively direct breast feed him. He is sleeping well. His colic has decreased very much. I am very grateful to Dr. Soni. I would like to suggest all new parents to please ask your pediatrician to check for any tongue tie or lip tie issues as there is very little awareness about it. It should not go unnoticed in order to avoid bigger problems in future.

★★★★★ 2 hours ago **NEW**

This review goes to Doctor Abhishek Soni and his excellent staff at Vanilla Smiles. I and my wife were told by a lactation consultant that our son had tongue tie and lip tie which caused latching, digestion, sleeping & colic issues and might even cause speech problems in the future. We consulted Dr. Umesh Vaidya at Cloud9 for the same and once he affirmed lactation consultant's thoughts we asked for a reference of a tongue tie specialist and he happily suggested Dr.Soni's name in an instant. We did not hesitate and immediately called him for an appointment. I must say Dr. Soni's clinic is like a treat for children with books, toys and what not which makes all children who visit comfortable. Doctor shared all important information about the tongue and lip tie in detail and showed us all the minute details on screen as well. He also told us why

details on screen as well. He also told us why we should go for the surgery at the earliest and how it will help us in the long term. He guided us in getting the exercises (an important factor in such cases) done and acclimatising ourselves and the baby before going into the procedure. We took our sweet time to get comfortable and then proceeded with the surgery which was a matter of only 2 hours. I must say the follow ups, guidance and support from the Doctor and his team were the reasons we went forward with this. Post the surgery my son has been facing no issues with latching. Colic has reduced immensely and he's been sleeping well. A big thanks to Dr. Soni!!

A suggestion from us to all the new parents out there - please try and get your baby checked as soon as possible for such conditions. As there is little awareness about tongue tie and lip tie, it goes unnoticed and may cause bigger problems in the future.
